EDUCATION

EIDIA, Euromed University of Fes <i>Engineering Degree in Artificial Intelligence</i>	Fes, Morocco 2025 – Expected 2028
EIDIA, Euromed University of Fes <i>Preparatory Cycle in Digital Engineering</i>	Fes, Morocco 2023 – 2025

EXPERIENCE

Software & AI Engineering Intern <i>Bounaim Auto</i>	Jul. 2026 – Aug. 2026 <i>Beni Mellal, Morocco</i>
- Centralized 5 procurement workflows in one internal platform by combining supplier quotes, currency and cost analysis, document imports, AI-assisted data capture, and human review - Made supplier comparisons more reliable by flagging incomplete offers, standardizing total-cost calculations, and keeping a clear record of every analysis for later review - Verified the platform with 139 backend tests; it scored 98.99% on document-field extraction, 100% on product-line extraction, and selected the correct top supplier match in 92.31% of eligible cases	
Founder & Software Developer <i>Convoroute LLC</i>	Jun. 2026 – Present <i>Remote</i>
- Founded Convoroute LLC and built an AI chatbot product for 3 common business needs: customer support, FAQ automation, and lead capture - Turned the product from concept into a deployable service by handling chatbot configuration, website integration, pricing, recurring payments, and production deployment - Created a repeatable client setup and onboarding flow so each chatbot can be configured, launched, billed, and improved after release from one product workflow	

PROJECTS

DARE-Bench Agent Reliability Study <i>Python, OpenAI API, Docker, Statistical Evaluation</i>	2026
- Ran a controlled 240-run study across 24 benchmark tasks to measure whether giving an AI agent more attempts improves its reliability - Found that task success increased from 34.2% to 50.0% when the agent was allowed five turns instead of three - Increased confidence in the result by repeating every condition five times, rescoring outputs with the official evaluator, and analyzing uncertainty and failure patterns	
medskel — Medical Image Skeletonization <i>Python, OpenCV, Shapely, NumPy</i>	2026
- Developed a new method for turning vessel-like shapes in medical images into simplified centerlines that can be measured more consistently - Reduced measurement variation between observers from 9.3% to 3.2% on 28 retinal images compared with a standard pixel-thinning approach - Validated the method with 28 hand-derived tests and 9 repeatable experiments, providing evidence that the improvement was consistent rather than accidental	
UEMF Présence — Smart Attendance System <i>Next.js, React, TypeScript, PostgreSQL, Prisma</i>	2026
- Built and deployed a digital attendance platform serving 3 user groups: students, professors, and administrators - Reduced opportunities for false check-ins by verifying student location and refreshing QR check-in codes every 10 seconds - Simplified attendance management with recurring class schedules, professor review tools, CSV reports, and a dashboard that highlights unusual check-in activity	

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, C++, SQL
AI & Data: AI/LLM Applications, Model Evaluation, OpenAI API, scikit-learn, pandas, NumPy, OpenCV
Web & Backend: React, Next.js, FastAPI, PostgreSQL, Prisma, SQLAlchemy
Developer Tools: Git/GitHub, Docker, Linux, Vercel, pytest
Spoken Languages: Arabic (Native), English (C1 — TOEFL iBT 112/120), French (B1), Spanish (Beginner)
