Objective

Third-year AI & Computer Science Engineering student seeking a **one-month internship in July 2026** to apply machine learning, software development, and cybersecurity skills in a professional environment.

Education

Euromed University of Fez – EIDIA

Sep. 2023 – Jul. 2028 (Expected)

Engineering Degree in Digital Engineering & Artificial Intelligence

Fez, Morocco

- 5-year engineering program specializing in AI; currently in 3rd year (5th semester completed)
- **Coursework:** Supervised ML, Cybersecurity, SQL/NoSQL, OOP (Java), Data Analysis (R), Computer Vision, Algorithms, Probability & Statistics, Embedded Systems

Projects

Evil Twin Attack Detection System | *Python, Scapy, Wireshark, Suricata/Zeek*

- Built real-time wireless threat detection system analyzing 802.11 frames – **applicable to enterprise WiFi security**
- Implemented frame analysis detecting AP spoofing, deauthentication attacks, and MAC anomalies with 95%+ accuracy
- Integrated with Suricata/Zeek IDS for automated alerting – **deployable in corporate network monitoring**

University Student Management System | *Java, JavaFX, SQL Server, UML*

- Developed full-stack desktop application following **Agile methodology** with iterative sprints and user feedback
- Designed normalized database schema and CRUD operations – **scalable to real university administration systems**

Real-Time Face Detection System | *Python, OpenCV, Haar Cascades*

- Engineered video stream processing pipeline achieving 30+ FPS on standard hardware
- Implemented bounding box visualization and face counting – **applicable to security and attendance systems**

ML Classification Pipeline | *Python, scikit-learn, NumPy, Pandas*

- Built end-to-end ML pipeline with preprocessing, feature engineering, and model evaluation
- Achieved 89% accuracy using Random Forest with cross-validation – **applicable to predictive analytics**

Personal Finance Tracker | *C, Qt Creator*

- Built desktop application with expense categorization, budget tracking, and data visualization dashboards

Medical Image Skeletonization Research | *MATLAB, Image Processing Toolbox*

- Implemented bisector-based algorithm for shape analysis – **applicable to medical imaging and diagnostics**

Statistical Analysis with R | *R, dplyr, ggplot2*

- Performed regression analysis and hypothesis testing on real-world datasets for data-driven decision making

Autonomous Drone Swarm Simulation | *MATLAB/Simulink*

- Modeled multi-agent coordination with collision avoidance – **relevant to robotics and logistics automation**

Technical Skills

Languages: Python, C++, C, Java, SQL, JavaScript, MATLAB, R, TypeScript

Frameworks & Libraries: Qt, React.js, Node.js, scikit-learn, OpenCV, NumPy, dplyr

Tools & Databases: Git, Linux, Qt Creator, MATLAB/Simulink, RStudio, Wireshark, SQL Server, MongoDB, Docker

Methodologies: Agile/Scrum, UML, OOP Design Patterns, Machine Learning, Cybersecurity

Soft Skills

Autonomy | Organization & Time Management | Critical Thinking | Problem Solving | Team Collaboration | Adaptability

Certifications & Languages

Certifications: Foundations of UX Design (Google/Coursera), Digital Marketing (Google)

Languages: Arabic (Native), English (Fluent – TOEFL: 112/120), French (Intermediate), Spanish (Beginner)
